CAREER OBJECTIVE

Motivated Software Engineer and 2026 B.E. Computer Science graduate with hands-on experience in Go and Java backend development. Currently building robust, concurrent monolithic architectures and secure REST APIs. Proficient in Go-lang, Core Java, J2EE, JSP, Servlets, JDBC, MySQL and MongoDB with a strong foundation in Object-Oriented Programming principles. Eager to leverage expertise in Go-routines, system design, and database optimization to build scalable, high-performance backend systems that deliver real-world impact.

TECHNICAL SKILLS

- **Programming Languages:** Go (Golang), Java (Core Java, J2EE), SQL, JavaScript
- **Backend Technologies & Frameworks:** Gin, GORM, JSP, Servlets, JDBC, Hibernate (ORM), JWT Authentication, REST APIs
- **Web Technologies:** HTML5, CSS3, JavaScript, Tailwind CSS, Responsive Web Design
- **Database:** MySQL, MongoDB (Aggregation Framework, Indexing), SQL (Joins, Subqueries, Normalization, Transactions)
- **Tools & IDEs:** Git, GitHub, Eclipse, IntelliJ IDEA, VS Code, MongoDB Compass, Swagger, Postman (API Testing)
- **Core Concepts:** OOP, Data Structures, DBMS, Exception Handling, Multithreading, Java Stream API, Lambda Expressions
- **Backend Concepts:** Pagination & Filtering (APIs), Database Indexing (MongoDB / SQL), Error Handling & Logging Best Practices
- **Concurrency & Networking:** Go-routines, Channels, TCP Networking, Concurrent Client Handling, Mutex/RWMutex, Atomic Operations, Race-Condition Management
- **Architecture & System Design:** MVC, Monolithic Architecture, REST APIs, HTTP Protocol, Scheduling, Graceful Shutdown

PROFESSIONAL EXPERIENCE

Sterna Security Solutions

Trainee Software Engineer (Go Backend Developer) | May 2026 – Present

- Developing and maintaining monolithic backend services and REST APIs utilizing Go, the Gin framework, and GORM.
- Engineering highly concurrent systems to handle simultaneous TCP networking clients using Go-routines, channels, and worker queues.
- Ensuring system stability and thread safety by actively mitigating race conditions through the strategic implementation of Mutex/RWMutex and atomic operations.
- Optimizing database interactions using raw SQL queries and MongoDB's aggregation framework for complex, high-efficiency data retrieval.
- Implementing core backend features including JWT authentication, scheduling, pagination, filtering, comprehensive logging, load buffering, and graceful shutdowns.
- Testing, validating, and documenting API endpoints extensively utilizing Postman and Swagger to maintain clear HTTP protocol standards.

PROJECTS

1. Banking Management System *Java | JSP | Servlet | JDBC | MySQL*

- **Developed** a full-stack banking application enabling user account creation, fund transfers, and balance inquiries using JSP, Servlets, and JDBC.
- **Designed** a normalized MySQL database schema to manage customer records, accounts, and transactions with referential integrity.
- **Applied** Java OOP principles and exception handling to ensure data accuracy and error management across all backend modules.

2. Game-Based CAPTCHA Replacement System *HTML | CSS | JavaScript | SQL*

- **Designed** an interactive game-based CAPTCHA system replacing traditional text CAPTCHAs to enhance user experience and security.
- **Implemented** client-side JavaScript logic to distinguish human users from bots using behavioral interaction patterns.
- **Integrated** SQL for session and verification data storage, reducing user friction by 40% compared to standard CAPTCHA methods.

3. Personal Mini Search Web Application *Python (Flask) | HTML | CSS | JavaScript | WolframAlpha API*

- **Built** a text-based AI assistant with voice output capability, integrating the WolframAlpha API for real-time information retrieval.
- **Engineered** backend command-processing logic in Flask to automate task execution and handle diverse user queries accurately.
- **Improved** task automation efficiency, reducing manual input through intelligent command parsing and API-driven responses.

4. Personal Portfolio Website *HTML | CSS | JavaScript | Tailwind CSS | Live: <https://aswinkumar-m.netlify.app>*

- **Developed** a fully responsive personal portfolio website showcasing projects, skills, and certifications for academic and professional purposes.
- **Built** dynamic UI components using JavaScript and deployed the site on Netlify for global accessibility with zero downtime.
- **Designed** with modern CSS (Flexbox & Grid) to ensure cross-device compatibility and a clean, professional user experience.

INTERNSHIP / TRAINING

Python, Artificial Intelligence & Data Science Intern *NSIC Technical Services Center*

- **Gained** hands-on experience in Python programming, machine learning fundamentals, and data science workflows.
- **Worked** with data processing libraries and AI model concepts; built automation scripts and performed exploratory data analysis.
- **Developed** practical understanding of AI/ML pipeline concepts including data preprocessing, model training, and evaluation.

EDUCATION

Bachelor of Engineering – Computer Science Engineering *2022 – 2026*

Park College of Engineering and Technology (Autonomous), Coimbatore

CGPA: 8.41 / 10.0

CERTIFICATIONS

- Java Full Stack Development – QSpiders, Coimbatore (Core Java, Advanced Java, HTML, CSS, JavaScript, SQL, JDBC, Hibernate)
- Python, AI & Data Science – NSIC Technical Services Center
- Cybersecurity Using Advanced Deep Learning Models – KPR Institute of Engineering and Technology (Workshop)
